

UK STORAGE INSTALLATIONS

ABOUT US

We design and deliver quality racking systems across the UK. Our services range from inspecting and re-configuring existing racking systems, to installing new racking systems.

Our focus is on finding optimal racking solutions to support client business needs and priorities.

We have been installing and re-configuring racking systems for over 20 years, working with global leaders in storage management, online retailing and logistics supply chains. During this time, we have grown from being a supplier of specialist installation teams, to a company providing a complete range of products and services across the UK warehousing and storage sector.

Importantly, we have become a trusted partner in delivering installations on-time and within budget, whilst retaining an outstanding safety record.

Our specialist installations teams work safely and carefully to deliver a quality installation to sector and client-specific standards. We're experienced in working alongside sprinkler and other service specialists to ensure a seamless installation.

By carrying out detailed surveys and providing guidance on the latest storage options, we deliver greater efficiencies for our clients, both in terms of building capacity and running costs.

SERVICES

UK Storage Installations Ltd offer a range of racking solutions and can provide guidance on the benefits and advantages they could bring to your business.

Our services include:

Racking Installation

We supply and fit a wide range of racking storage solutions. These include but are not limited to:

- Wide, standard and very-narrow aisle racking;
- Man-riser racking;
- Standard and auto-pallet shuttle racking;
- High-bay racking;
- Drive-In and Drive-Through racking;
- Pallet Live Dynamic racking;
- Push-back Dynamic racking;
- Multi-tier/catwalk racking;
- Semi-automated racking;
- Fully-automated racking;
- Rack clad construction.

Racking Re-configurations

The UK Storage team have a wealth of experience in the industrial and logistics marketplace. We work with our clients to find the best racking solutions in terms of efficiency and optimising space usage.

Sometimes a re-configuration path provides a more economic solution for our clients, and reflects how their business needs have changed.

We explore and work out re-configuration options, and can provide information and advice for potential returns on investment to be understood, and decisions to be made.

A robust and reliable supply chain ensures we meet the project deliverables and allows your business to benefit quickly from the solutions we provide.

Racking Relocations

If you are looking to relocate premises and a re-configuration solution is not possible or appropriate, then we can support this transition period.

Our dedicated team will meet with you to discuss the logistics and programming of your unique context - ever conscious of potential continuity of business requirements. We will carefully dismantle warehouse racking systems, mezzanine floors and other warehouse equipment and relocate as required.

Warehouse Dilapidations

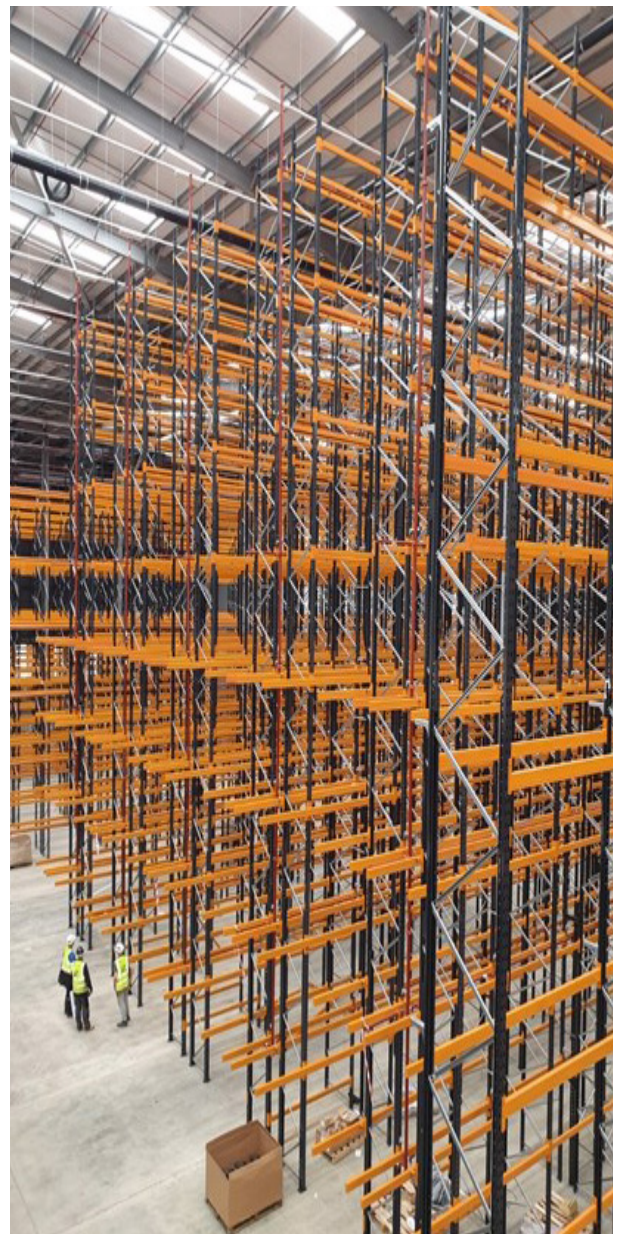

If you are thinking of leaving a building, whether owned or leased, there is a strong likelihood your project will involve a dilapidations element - restoring the building for the landlord or buyer. We have supported many businesses in this process, including the removal of racking, stripping-out services and associated building repairs.

Racking Inspections and Maintenance

All storage systems and equipment will inevitably suffer damage, even with fully-trained warehouse operatives. This damage, if left unattended, may cause collapse - effecting business continuity, having a financial impact, but, more significantly, may result in injury or loss of life.

Project Management

As with all projects, planning is key to success. Our team are adept at both leading projects, or working under the direction of client-appointed project management teams. Our teams have a wealth of project experience and are conversant with all health and safety requirements. We are also able to undertake a principal/main contractor role.
